

SIZE NORTHAMERICA STANDARD 3D AVATARS

Real People. Real Data. Real Fit.

Our avatars are developed using data from the representative Size NorthAmerica survey, which includes over 100,000 real human 3D body scans to accurately represent North America's unique sizing. This data-driven approach ensures realistic and representative avatars for various applications, from fashion and ergonomics to product development and virtual fit testing.

Our avatars come in different age groups, shapes and sizes.

FEATURES

Base

21 measurements are regarded for shape generation process and covering all relevant body areas

Texture

Plain color with measurement lines, size label and branding (T-pose only provided in plain texture)

Features

Head, hands and feet for optimal visualization of proportions. Further adjustments of armpits, crotch, bust area and gluteal fold guarantee optimal quality of simulation results. Optimized mesh designed for the use in 3D tools

Posture

Provided in I-, A- & T-pose (added individual poses on individual request)

Formats

Available in relevant formats for easy integration into available target systems, such as CLO 3D, Vidya, Style 3D and Browzwear

Documentation

Measurement documentation for each avatar as HTML-protocol

Accuracy

I-pose according to target measurements. A-pose & T-pose slightly differ from target measurements as posture changes

Babies, Toddlers & Children Avatars

Developed from 3D body scans from the Size NorthAmerica Babies & Toddlers study, our baby and toddler avatars offer a data-driven foundation for accurate product development. They reflect the full progression of body dimensions and shapes—from birth through early childhood—capturing the distinctive proportions and postures of this target group with anatomical precision.

Available as complete Size Sets across entire Size Range

Our digital avatars support grading validation not only in standard core sizes, but also at the size extremes. This enables comprehensive assessment of fit and proportion, ensuring consistency and precision across the entire size range.

Size Tables

Each avatar is developed using a detailed size table that accurately reflects the body measurements and proportions of the North American population. This ensures optimal market coverage and supports size distribution aligned with real-world consumer demographics—enabling fit development that is both data-driven and commercially effective.

Our Fit Forms

are created from the same 3D avatar utilizing the Size North America data to ensure consistency in fitting and shape. Our Size NorthAmerica Standard forms are available as are customized forms. Branding for customized forms and 3D printed prototype for reference approval.
